OBJECTIVE

With expertise in both front-end and back-end development, I'm deeply passionate about building products that have a wide-reaching impact. I have a strong problem-solving mentality, dedicated to finding long-lasting solutions and preventing future issues. I thrive in fostering healthy team connections and adapting quickly to emerging technologies. I firmly believe that my skills and mindset would make me an exceptional addition to your company.

EXPERIENCE

Nigeria (Remote)

Sep 2021 - Jan 2023

Full Stack Developer

SpringUpTech Africa Ltd

During my tenure as a Full Stack Developer at SpringUpTech Africa, I successfully worked on over 10 projects. With a strong focus on delivering seamless user experiences and building reliable server-side systems, I demonstrated expertise in HTML, CSS, JavaScript, and frontend frameworks to create intuitive and visually appealing interfaces. Leveraging my proficiency in backend technologies such as PHP, Laravel, Node.js, and databases, I contributed to the development of efficient and scalable web applications. I also excelled in resolving bugs and implementing new features in existing projects, showcasing my ability to adapt and enhance software functionality.

Littoral, Bénin

Jul 2021 - Present

Lecturer in Computer Science

ESTAM University

During my tenure, I successfully taught computer science concepts to students across different levels (200, 300, and 400). My responsibilities included creating lecture plans, developing course materials, and delivering practical demonstrations. I covered a range of courses, including web programming (HTML, CSS, JavaScript, Python, and PHP), computer network and data communication, AI and Logic Programming, C# and C++, and Object Oriented Programming with Java.

Remote

Mar 2021 - Jun 2021

Marketing Manager

Botamp

I led promotional efforts to raise brand awareness in the Anglophone market, collaborating with No-code enthusiasts and social media communities which gained us valuable feedback. I successfully established a thriving community on Twitter using the built-in public framework. Additionally, I developed learning resources in collaboration with tutors and improved blog posts by translating and enhancing them for Anglophone users.

United States (Remote)

Apr 2019 - Jan 2021

Marketing Manager

Happierco & Etrilabs

Etrilabs serves as the Incubation hub for Happierco startup, I began as a marketing intern and rose to the position of Head of Marketing after 14 months. Leading a team of dedicated marketers during the challenging COVID era, I developed and executed effective campaign strategies across content, email, social media, and sales.

With my web design skills, I contributed to the creation and maintenance of blog pages with WordPress. I implemented effective SEO practices that resulted in our articles ranking on the first pages of search engine results. By tracking progress using KPIs and OKRs, I ensured alignment with company goals while collaborating with cross-functional teams, including engineering and product development.

Nigeria

2017 - 2019

Founder and Code Instructor

Code To Create

I founded Code to Create with a mission to support students in learning coding. Key accomplishments include:

- Developing and delivering high-quality coding education materials through various channels.
- Collaborating with experienced educators and developers to create engaging learning experiences.
- Building partnerships with educational institutions and organizations to expand the reach of Code to Create.
- Managing the business's financial and operational aspects, including budgeting and strategic planning.
- Leading marketing and outreach initiatives to attract new students and partners.

Note: Code to Create originated as a side project during my university years, providing me with valuable hands-on experience.

HONORS & AWARDS

Best Graduating Project of the Year (2019)

The department of Information Technology/Computer Science awarded me the 'Best Project' of the year at ECOTES University, 2019.

My project was an AI system that could capture an image, understand the image, say out what it sees in the image in 9 different languages using Google Translation and Cloud Vision API.
